

White Cedar - Shallow, fibrous root system. Excellent for windbreaks as it creates a dense wall. Will tolerate poorly drained soils and moderate shading.

Leaf: Evergreen, scale-like, on main shoots, 1/4 inch long with long points. Lateral shoots are flattened, 1/8 inch long with short points.

Flower: Species is monoecious; solitary, females green with 4 to 6 scales; males are green tipped with brown and globose.

Fruit: A cone, 1/2 inch long, oblong, borne upright on the branches, scales are leathery, red-brown and rounded, with a small spine on the tip.

Twig: New growth is green and scale-like, turning brown, occurring in very flattened foliar sprays.

Bark: Fibrous, red-brown, weathering to gray; diamond-shaped patterns are usually apparent.

Form: A small to medium sized tree shaped like an arrowhead - a pyramid with a broad base and a small, round top, often with several main trunks.
